

Lab: User Journey using Sequence Diagram

- Mohammad Jamshed Qureshi
- GBC Student: 101260567
- Program: T175 Blockchain Development Fall 2019)

Description:

Its a 2-factor authentication service based on Blockchain. In the below scenario: A user/device enter their 1st level credentials to enter a website/service. The app server contacts the blockchain to generate a one-time password and sends it back to the user/device. User/Device uses this 2nd level credential to access the needed resource.

Actors

- User
- DApp
- Ethereum Blockchain Smart Contract

Actions:

- User Login Request
